POPAl's Sustainability Vision

We are committed to industry wide action to minimise the environmental impact of the display industry. A not-for-profit organisation we support our clients by enabling measurement, training, and collaboration, with a vision and a strong focus on the circular economy.

Wayne Hemingway
Keynote Speaker

Co-founder of Hemingway Design, Wayne brings a bold yet practical approach to sustainability in design and business.

DISPA®re

New Product From The Dispa® Family

DISPA®, the 100% paper board, has been an integral part of 3A Composites Display Europe's continually growing product portfolio since 2015. Up until now, DISPA® was only available with a "canvas" surface and in 2.4 mm and 3.8 mm thicknesses. In February 2023 another new version of this popular product has been introduced: DISPA®re featuring a core made of 100% recycled paper.

DISPA®re is a multi-layer paper board, available in the thickness 3.8 mm (5-layer). DISPA®re features impressive smooth, bright white surfaces and a core made entirely of recycled paper. The embossed paper core, already well-known in DISPA®, ensures the board is exceptionally rigid and outstandingly flat. In the production of DISPA®re, we use only FSC® certified paper (FSC® C127595) for both the covering layers and the core. The boards are fully recyclable and disposing of them as waste paper is easy and inexpensive.

Using DISPA®re makes applications even more sustainable. Point-of-Sale displays, hanging signage in a supermarket or shop, seasonal indoor advertising campaigns - there is virtually no limit to your creativity.

DISPA® - 100% PAPER

100% RECYCLABLE

FSC®-CERTIFIED
